

## SILVER SATIN POTHOS *Scindapsus pictus*

A Silver Satin Pothos is planted in a blue-green glazed ceramic pot. Silver Satin Pothos produce speckled, heart-shaped leaves on vines that can trail many feet. Vine length can be controlled by periodic pruning. Place in bright indirect light for faster growth, but plants will also tolerate low levels of sunlight. Check the soil for dampness once a week. If dry, add about a cup of water, keeping in mind that any excess will build up in the bottom and should be avoided.

**GEOGRAPHIC ORIGIN:**  
Southeast Asia

**GREAT FOR:** Low light

**FEATURES:**  
Versatile, Air Purifying

**GROWTH RATE:** Slow in low light

### LIGHT

Grows more quickly in bright, indirect light but can tolerate low light as well. Avoid direct sunlight.

### WATER

About once every week. Allow top few inches of soil to dry out before watering thoroughly. Water less often in winter.

### LEVEL OF CARE

Easy! Just avoid direct sunlight and cold temperatures.

### TEMPERATURE

Prefers warm conditions above 60F. Keep away from drafty windows and air conditioners.

### FERTILIZER

Feed with a mild liquid, indoor plant fertilizer about 1-2 times a month during the growing season. Do not fertilize in winter.

### SOIL

A peaty All-Purpose potting soil with good drainage works best.

### PRUNING & PROPAGATION

Prune damaged or yellow leaves by cutting to the leaf node. To propagate, place stems of vine cuttings in water and roots should form within a week or so. Replant in soil.

### PET FRIENDLY?

Sorry! Plant contains very sharp calcium oxalate crystals that, when eaten, cause mouth and digestion irritation and possibly more serious problems.
