

## ECHEVERIA *Bright light, Low-maintenance*

An Echeveria succulent is planted in a speckled ceramic pot. Echeverias come in mostly pastel colors with a pearlescent sheen and can have textured or smooth foliage. Each summer, Echeveria succulents will send up a tall flower stalk if given ample lighting conditions. Place in bright indirect light or a space that receives a few hours of morning sun. Check the soil for dampness once a week. If dry, add about a half of a cup of water, keeping in mind that any excess will build up in the bottom and should be avoided. Water should be applied to soil, not to the plant itself.

**GEOGRAPHIC ORIGIN:**  
Mexico and Central America

**GREAT FOR:** Bright Sunlight

**FEATURES:**  
Low-maintenance

**GROWTH RATE:** Slow

### LIGHT

As with most succulents, Echeverias grow best in full sun or partial shade. In hot summers, more shade may be necessary.

### WATER

Allow soil to mostly dry out between waterings. Pour water on soil, not the plant's rosette.

### LEVEL OF CARE

Easy! Just place in bright sunlight and don't overwater.

### TEMPERATURE

Warm temperatures are best during the growing season. Plants enjoy cool temperatures down to 55F in the winter.

### FERTILIZER

Feed with a mild cactus fertilizer about twice a month during the growing season. Do not fertilize in winter.

### SOIL

Use a well-draining cactus/palm potting mix.

### PRUNING & PROPAGATION

Prune damaged leaves by pulling from the stem. To propagate, plant stem or leaf cuttings in soil.

### PET FRIENDLY?

Yes! Echeverias pose no risk if consumed by pets.
