

ECHEVERIA *Bright light, Low-maintenance*

An Echeveria succulent with rosette leaves is planted in a speckled ceramic pot with a seafoam green band. Echeverias come in mostly pastel colors with a pearlescent sheen and can have textured or smooth foliage. Echeverias will send up a tall flower stalk if given ample lighting conditions. Place in bright indirect light or a space that receives a few hours of morning sun. Check the soil for dampness once a week. If dry, add about a half cup of water, keeping in mind that any excess will build up in the bottom and should be avoided. Water should be applied to soil, not to the plant itself.

GEOGRAPHIC ORIGIN:

Mexico and Central America

GREAT FOR: Bright Sunlight**FEATURES:**

Low Maintenance; Pet-Friendly

GROWTH RATE: Moderate**LIGHT**

As with most succulents, Echeverias grow best in full sun or partial shade. In hot summers, more shade may be necessary.

**LEVEL OF CARE**

Easy! Just place in bright sunlight and don't overwater.

**FERTILIZER**

Feed with a mild cactus fertilizer about twice a month during the growing season. Do not fertilize in winter.

**PRUNING & PROPAGATION**

Prune damaged leaves by pulling from the stem. To propagate, plant stem or leaf cuttings in soil.

**WATER**

Allow soil to mostly dry out between waterings. Pour water on soil, not the plant's rosette.

**TEMPERATURE**

Warm temperatures are best during the growing season. Plants enjoy cool temperatures down to 55F in the winter.

**SOIL**

Use a well-draining cactus/palm potting mix.

**PET FRIENDLY?**

Yes! Echeverias pose no risk if consumed by pets.
